### 2.6 Quality of pavement

Pavement of non-leveled cobblestones

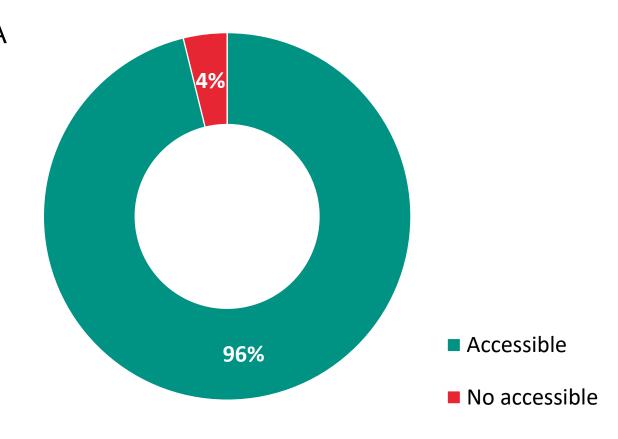

Faults in> 50% of the street

Strong slope without non-slip measures

### 2.6 Quality of pavement

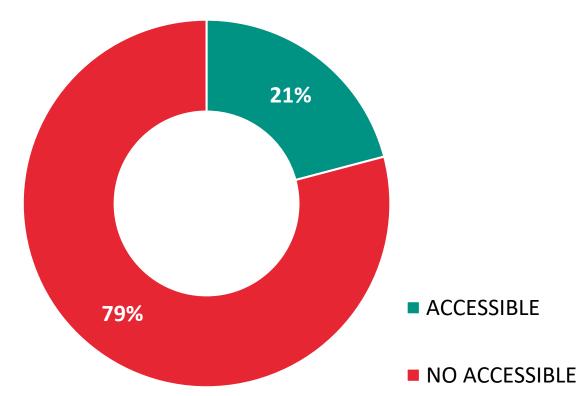

Pavement accessibility BARCELONA

## 2.7 Quality of changes of level

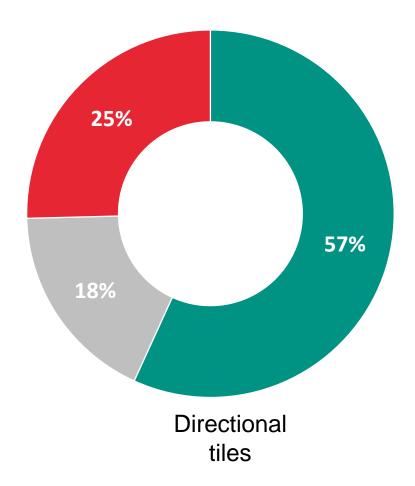

Change of level accessibility BARCELONA

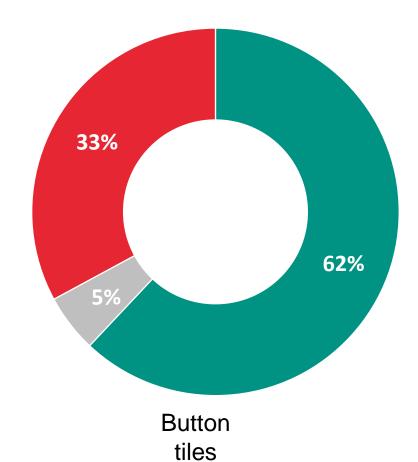

## 2.8 Quality of tactile paving

## Tactile paving accessibility BARCELONA

## 03 Planning

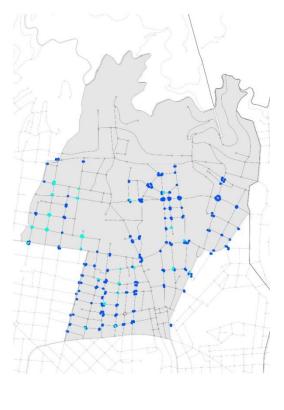

#### **Planning**

## 3.1 Short-term planning

## Priorization Based on evidences

Dropped kerb with steps

Dropped kerb with slope <12%

#### 3.2 Long term planning

#### **Accessibility of proximity**

According to the diagnosis, it seems strategic to improve physical accessibility not only in the city and district centers, but in the neighborhoods of the city. This improvement, in collaboration with the districts of the City, should allow improving accessibility in streets, transport and commerce. Linked to the right to the city, accessibility must be specified in the municipal and district investment programs.

#### **Communicative accessibility**

Improve the communicative, cognitive, content and product accessibility in the different services and spaces of the city. This is a challenge which involves also the private sector. Public and private investment and collaboration are necessary.
